

Member of Technical Staff - Full Stack

₹12L – ₹15L • No equity

Summary

You will be considered the first engineering hire of the startup that's re-imagining the Indian logistics & transportation experience with its range of green, affordable and easy-to-use EV solutions. This is a rare opportunity where you'll get to help define the tech stack and culture of our growing team. You'll work hand in hand with our leadership team to work on everything from product to development to testing. Comfort with front-end and back-end code is a necessity as you'll be expected to jump around the stack with a can-do attitude. As a senior fellow, you are expected to monitor, maintain and keep our services in its best shape.

Technologies

Python + Postgres + React + Javascript + Unix + AWS + Devops

Experience

2 - 4 years

What Gets Us Excited

1. Early-stage startup experience and proven ability to thrive in a fast-paced, continuously evolving environment.
2. Growth mindset - you don't just code but take a keen interest in other aspects of the business.
3. Substantial understanding of programming concepts, design patterns & best practices.
4. You are unfazed by ambiguous, open-ended problems.
5. An uncanny ability to unblock yourself - you're a resourceful problem solver that can break through barriers without needing oversight.
6. Ability to communicate complex ideas succinctly.
7. Demonstrated success building fast, efficient solutions to complex problems.
8. Ability to think through short-term vs. long-term needs and trade-offs.
9. Enjoy testing prototypes to validate assumptions.
10. Experience with Python / Postgres / React / Javascript / AWS / Docker / DevOps

Why You May Love Us

1. Dynamic, fun environment with a highly talented team
2. Early-stage startup experience

3. Did you miss working out of the office? We have a really cool workspace.
4. No bureaucracy environment. We do what is best for our stakeholders & the company.
